- I've been doing some thinking today. This afternoon, in fact. I met with a person who has done me a lot of damage in my life.

- I quickly clocked to the fact that they had a plan. It was to inveigle me in their life again.

- Without going into too much detail, it ended up meaning I felt dirty, sick and nauseous.
- Three hours or so later I feel exactly the same.

- There's a cousin of mine – very successful in both the familial and the professional (neither being my case) – who once assured me that not all truths are relevant.

- I didn't like this, the minute I heard it. But I couldn't quite, then, put my finger on it.
- After today's meeting, not with my cousin I hasten to add (just to clarify), I have realised why I felt then and now the converse: all truths are relevant – or, if not, in an interconnected universe of butterfly effects, none are.

- And if we follow this line of reasoning to its ultimate degree, since some *clearly* are relevant, it follows that all must be.

- And then I realised another thing: what confers true power on an individual or organisation in societies like ours isn't the power that goes with a post but the power that influences invisibly.

- What I mean when I discuss this thing I have termed **#neoterrorisontheindividual**: that is, a tech-driven **#gaslighting** conducted habitually, now, across all sectors and fields of human endeavour:

- <https://gb2earth.com/citizenx>

Neo-terrorism on the individual in a 21st century Western liberal democratic context: a practice-based PhD-level research proposal

- And so this is the reason why some people – many, indeed, I feel ... too many by now – have chosen to say not all truths are relevant.

Because, in so doing, this allows them –
proactively enables them, even – **to**
acquire and expand their power through
***influencing* their way through life, rather**
than through *exerting* this thing we call
power, but in more legitimately apparent
ways.

This is where I am when I talk about **#darkfigure** and **#neocrime**: areas of criminal and zemiological activity (legal societal harm) not visible to criminal-justice and law-enforcement systems for a multitude of reasons.

What is neo-crime?

- <https://gb2earth.com/hunch/neocrime>

- In truth, you may find me more on your side than you expect – those of you who, like my cousin, demand that we accept **not all truths** **need to be relevant** for the idea of truth to **have** **its relevance.**

It's when we talk about the following:

- how **#totalsurveillance** philosophies and the idea of **#machineprimacy**,
- in the wake of Hamas and its recent horrors in the **most machine-surveilled region of the world**,
- never mind 9/11 way-back-when,
- may **inhibit the bad guys much less than ourselves**.

Machine-primacy vs human-primacy in security, espionage and law-enforcement

- <https://gb2earth.com/primacy>

That is, *these* days when planning new types of terror, the bad people have found ways to think outside the restrictions of our **#totalsurveillance-#it**, whereas we, as democratic workforces working dutifully within its constraints, have ended up having our free-thinking fatally winged. And certainly when compared to the **worst criminal minds on the planet**.

And because we ourselves have been increasingly inhibiting our own creative capacities through such **#surveillance-tech**, whilst – increasingly – creative criminals escape such limitations, **9/11 is no longer a terrifying historical blip.**

Since then, **Putin's Russia**. And now **Hamas** **against all the peoples of the region.**

We need, really do, absolutely must return to the secrecy levels of the original **#it-#tech**, where we just about did have that digital pencil & paper I've been advocating for a while now.

spt-it

the privacy of pencil and paper, digitally

- <https://secrecy.plus/spt-it>

If creative crimefighting truths are to emerge intact, as we attempt to battle an increasing tide of creative criminality, both unhinged *as well as* unstoppable, I do actually agree we need to hide *some* truths.

But specifically:

1. Those **nonconforming insights,**
2. only reached by **equally unleashed and therefore**
***equally* free-thinking *good* people,**
3. whose role then would be to out-think the bad
4. before they even considered their types of evil in
the first place,
5. never mind implemented them.

The final process then becoming ...?

- To first **reverse-engineer** past criminality (perhaps, even, to date, that which has been unsuspected),
- in order to learn how to properly **forward-engineer**,
- the kind of **creative criminality that outwits our still-needed machines.**

And how do these humans
outwit our machines so
terrifyingly?

Because machines only predict
the future on the basis of the
past.

Whereas humans can predict *and*
make the future on the basis
of ... the future.

So.

Imagine this.

What if we were able to bring the two together?

What if it were possible to make several different ways of seeing the world work

together in much more seamless and respectful ways?

What if we *finally* engineered an **#it-#tech** – architectures and all – which served, as well as *chose*, to promote:

- an increasingly untrammelled capacity on the good guys' sides,
- in order to be able to **previsualise the structured** violence of the worst an inhumanity can throw at us.

Tech
Thinker

- <https://youtu.be/VI4qZCCpjE8>

Because what's lately undeniable is that the criminals are already deepening their capability to outwit our chosen reliance on a #machineprimacy, at the expense of *their* ongoing #humanprimacy.

“fighting fire with fire”

- <https://secrecy.plus/fire>

Not all truths must be disclosed,
you say? Or at least taken into
account?

Then I do agree, happy to – though
even here ... only kind of.

Not so much that *not* all truths are
RELEVANT ...

More so, that not all should be
immediately REVEALED ...

Before, I mean, what I would term their OWNERS – their direct creators; those who think them into being I mean – become fully comfortable with sharing them to a wider world.

Why?

Because that's the luxury the most horribly creative criminals ensure they always have:

- *they* can plan the next 9/11, Ukraine and Hamas in environments no longer inhibited by **#totalsurveillance**;
- *they* can fly with their terrible ideas in the first place, without potential disapproval to inhibit their deepest intuitions; and
- *they* know no one will see any of those dark thoughts whilst they are still not duly readied for exposure to the public.

Can we do any of the things mentioned on the previous slides as effectively in the fields of **operational warfare, spycraft, law enforcement and security?**

Can we?

Don't the three events already outlined in this presentation show us we can't – without a deep change in how we understand the **true value-add** of becoming far more **#secrecypositive** as a *fundamental tool to fight creative criminality?*

- What **"The Philosopher Space"** is all about, actually.
- But this time, one for the good people amongst us, so war, espionage and crimefighting get as creative as the criminality they all need to keep at bay *and* conquer.

- <https://gb2earth.com/pgtps/space>

And this is what, with everything mentioned today,
we aim for us *all* to get better at:

plumbing the depths of human hatred safely and
securely,

- in order to prevent it emerging in the **cities and**
communities of good people everywhere,
- as a **reportable fact**, ever.

One final observation, too.

It's **not the only way**. And I'd be the first to argue this, too.

In fact, it should be **one of two ways at least**.

We therefore propose introducing new kinds of technologies and architectures to deliver a brand-new, firmly enhanced and expanded **#humanprimacy** - a philosophy and set of architectures which may truly surprise us.

For they may have no limits at all.

Humanity unleashed, this time for the good.

The Neo-Terrorism Platform: definition

complexity.me
done simply well

What if Donald Rumsfeld was wrong?

What if we could **uncover the unknown unknowns**?

And what if we did it by seamlessly combining the **speed of modern AI** with the **power of human intuition**?

secrecy.plus
nonconformist | secrecy +ve | totalsurveillance-compliant

complexity.me
done simply well

So.

The opportunities are clear.

One thing, however, we *must*
continue to do as before.

We should continue to stop defeating this **criminally creative human fire**, which I've been describing, with the existing **#machineprimacy** which:

- in a world of security where not everything can be said,
- have professionally prevented
- many events similar to 9/11, Putin's Russia and Ukraine, and Hamas's attack on all the peoples of the region.

And now a closing observation.

It's also true that neither **#machineprimacy** nor **#humanprimacy** as actions of our **nation-states**, and of their **forces at the service of we the citizens**, need to be the whole story.

We citizens, ourselves, should surely also be encouraged to play a much firmer part in democracy's maintaining and future health.

The author of this slide-deck therefore additionally suggests we should ideate what he calls the **#BuildingoftheFEARlessCITIZEN**.

KEEPING IT SIMPLE:
Building the
FEARless CITIZEN

#NoFutureUkraines

- <https://gb2earth.com/research/fearless>

#BuildingtheFEARlessCITIZEN *is* a project of new technologies, but in the sense the French philosopher Foucault understood the terminology:

- ways of structuring society systemically,
- for ill or good.

In our case, obviously the latter.

And including new **#it-#tech** opportunities, as much as innovative kinds of legal figures and other society-engineering approaches.
